The Cochrane Handbook for Systematic Reviews of Interventions details the hallmarks of a successful adapted from Petticrew M. Systematic reviews from astronomy to zoology: myths and misconceptions. Table 1. Systematic Reviews Versus Traditional Narrative Reviews

- Organize and complete a scientific literature analysis. The guidelines provide staff with a standardized operating procedure.
- Conducting preliminary MeSH searches
- Strive to locate all relevant published and unpublished data.
- Start with clear question to be answered or problem statement.
- These methods or study quality appraisal are excluded in general guidelines.
- Critical appraisal of both literature and methods.
- Literature review; guidelines; literature search; literature analysis

Figure 3. Quantitative Analysis of Primary Findings

Conclusions

- All methods and guidelines are in place for a literature search.
- The Deliverables of the project, including the systematic review, are complete and ready for publication and other biases.
- The SOP must define the roles of individual cohorts throughout the literature review process.
- The literature analysis protocol and this poster.

Acknowledgments

- We would like to thank Cochrane Collaboration and other academic organizations for providing the samples of published MeSH terms.
